

Release notes Martlet V19.5/7.521

Release notes firmware Martlet Flight Controller V19.5 (needs to be updated with HT pilot GUI V7.52)

- Improved stabilization (camera used to wobble on pull pitch down position, solved)
- Calibration of camera footprint (target acquisition) in flight, improving accuracy
- Fly by cam mode (camera yaw is UAV yaw)
- Auto centering camera when cam is pointing 90 degrees downwards
- Camera status indicated acoustically: STOW_ON / STOW_OFF / CAM_CONTROL=YAW

HT pilot GUI V7.521 (needs to be updated together with FC version V19.5)

- Presentation of ASL values in HUD – initially displayed in meters, for feet: press on ASL value
- Soft keys pop-up screen for camera position calibration
- Interaction with new camera control features
- Bingo time calculation improved
- Extra bingo Warning in upper bar when bingo hits 5 minutes
- Readability of the values in HUD improved
