

### **software update (v1.2.71.auterionos) for your DeltaQuad Evo**

A new software update (v1.2.71.auterionos) for your DeltaQuad Evo is now available. Be sure to install it before your next flight to enhance your vehicle's performance and keep your warranty intact.

Change log:

- Improved ground collision prevention logic during the fixed-wing landing stage to avoid misreadings in rain or cloudy conditions.
- PDM: Stopped payload doors from briefly opening during the startup sequence.
- Corrected mapping mission plans to ensure accurate altitudes for return segments.

If you haven't seen a notification from your ground control station, please click the button below for a simple step-by-step guide to update your Evo.
